PakTech Recycling Program Guide

PakTech strives for sustainability in all facets of our business. As you know, PakTech handles are made with 100% post-consumer material and are repurposed from milk jugs and similar containers. They are in turn 100% recyclable and often repurposed as composite lumber, flower pots, pipe, PakTech handles, etc.

Please put our handles back into the recycling stream so they can be repurposed into new products.

PakTech continues to be committed to the environment and our communities. We all need to do whatever possible to keep plastics out of our oceans, parks, community and landfill and back into the recycling stream so they can be repurposed. As part of this commitment, we developed our own recycling program.

PAKTECH RECYCLING PROGRAM GUIDELINES

1. We will supply a Recycling Collection Bin that you can put on site.
2. We will supply you with a poster that you can display above the Collection Bin and a sticker for the front of the Collection Bin.
3. We will help you to locate a PRF or MRF that will accept the handles that are collected.
4. You communicate direct with the PRF or MRF to facilitate the handles collection logistics.

In addition, we’ll provide you with digital assets that you can utilize on your social channels, website and for other marketing purposes. We’ll also include you on our website as a participant in PakTech’s Recycling Program.

We know that since we both hold the same importance and value of sustainability and community, we are highly optimistic about the participation and success of this program.

Please reach out to PakTech should you need help coordinating collections for your facility.
